

AV2 Landing Page – Requirements Document
Page: Ayodhya & Varanasi Yatra – Performance Marketing Landing Page 2
URL: <https://www.saum.in/temples/av2/>
Status: New page, to be built
Prepared for: Cursor / dev implementation

1. Context & Objective

Saum is running performance marketing (Meta ads) for the Ayodhya-Varanasi Yatra offering. Two landing pages support this:

- **AV1** (`/temples/av1/`) – already live. Users arrive here *after* completing a Meta Instant Form, and can download the brochure immediately.
- **AV2** (`/temples/av2/`) – *this page.* Users click straight from the ad with no prior form-fill. AV2 must build enough interest to justify filling in a form on-page, while deliberately not giving away everything (exact day-by-day schedule, hotel names) – pricing is the one exception, included deliberately as a lead-qualification filter (see §5.7).

Reference page for layout inspiration:
<https://whistlingwoods.co.in/wwi-actorstudio/> (sticky form beside content on desktop).

Core design principle: every content section shows the *shape* of the experience, not the granular specifics. Each section should end with a soft pull toward the form rather than fully resolving the reader's curiosity.

Source content: Main destination page (`/temples/ayodhya-varanasi/`), Saum brochure (Ayodhya_Varanasi_Brochure.pdf), and a sample customised itinerary PDF – all referenced below, adapted for this page's specific constraints (3D2N, pricing included, no placeholders).

2. Navigation & Global Elements

Header

- Logo only (links to `/`), no primary nav menu.
- Click-to-call and WhatsApp icon, top right (reuse existing number/pattern from main site: `+91 99029 30443`).
- No links to Temple Tourism / Special Trips / About / Contact – this is a single-goal conversion page, nothing should pull traffic away from the form.

Footer

- Minimal: contact info (phone, WhatsApp, email `info@saum.in`), and Policy links (Terms, Privacy, Refunds & Cancellations) only.
- No Quick Links / social icons / sitemap – same reasoning as header.

No change required to the main site's global nav – AV2 uses a standalone stripped-down header/footer used only on this page.

3. Page Structure

3.1 Hero

****Layout:**** Full-width hero image/background with headline block on left (or centered), form docked to the right on desktop.

****Content:****

- Headline: **"A Seamless Ayodhya & Varanasi Pilgrimage, With Every Step Handled By Experts"**
- Subheadline: **"3 Days, 2 Nights of priority darshans, luxury stays & 24x7 concierge care – from Kashi Vishwanath to Ram Mandir."**
- Primary CTA button: **"Get Pricing & Itinerary"** – scrolls to / focuses the form.
- Hero image: Ganga Aarti or Ram Mandir shot (reuse `AyodhyaVaranasiHero.jpg` or `AyodhyaVaranasiGangaArtiLarge.jpg` from main site assets if suitable quality; otherwise source new).

****Desktop:**** Form card sits beside the hero content, sticky (see §4). The image is ****not**** laid under/behind the form – it sits behind the headline/content column only, with the form rendered in its own card alongside it. Use a ****landscape orientation**** image.

- Recommended size: 1600x900px minimum (16:9), up to 1920x1080px for high-density displays.

****Mobile:**** Full form renders inline immediately below the hero (see §4) – not collapsed, not deferred.

3.2 How a Saum Pilgrimage Is Different

****Purpose:**** Build trust through process specificity and founder credibility rather than scale metrics (Saum is early-stage; usage/pilgrim-count numbers would undersell, not build trust).

****Content – comparison table:****

		Typical Operator		Saum	
	---	---	---	---	
	Darshan		Long queues, uncertain timing		Sugam/priority darshan tie-ups, priest assistance
	Hotels		Booked by star-rating only		Hand-picked & personally vetted 5-star and Boutique stays
	On the ground		You're on your own		Knowledgeable guides, premium transport, 24x7 concierge
	Special needs		Rarely accounted for		Built for seniors, pregnant travelers, families with infants – wheelchair assistance, medical kit, on-call doctor

****Founder line (below table, styled as a pull-quote):****

"We have personally walked every ghat and gully we send you to." – attribute to Saum founder:
"– Meghana Bangalore, Co-founder, Saum"

3.3 The Saum Experience (icon grid)

****Purpose:**** Fast-scan differentiators. Safe to show in full – no itinerary/pricing leakage.

****Content (6 icons):****

1. ****Priority Darshan**** – Hassle-free VIP temple visits
2. ****Luxury Stays**** – Hand-picked 5-star and Boutique hotels
3. ****Expert Guides**** – Knowledgeable, multilingual guides
4. ****Premium Transport**** – Comfortable SUVs & luxury cars
5. ****24x7 Support**** – Round-the-clock concierge services
6. ****Dining Preferences**** – Vegetarian, Satvik, Jain & other food options

3.4 Destinations Teaser

****Layout:**** Two columns – Ayodhya / Varanasi.

****Purpose:**** Show breadth without listing everything – signal there's more depth than the reader can fully see, prompting the form-fill.

****Content:****

****Ayodhya****

Headline sites: Ram Mandir, Hanuman Garhi Mandir, Saryu Ghat

Closing line: ****"Plus 3-7 more sacred sites and activities across Ayodhya, curated to your pace."****

****Varanasi****

Headline sites: Sri Kashi Vishwanath Mandir, Kaal Bhairav Mandir, Ganga Aarti (VIP seating)

Closing line: ****"Plus 3-7 more sacred sites, special pujas and cultural activities across Varanasi, curated to your pace."****

(Do not list the full brochure temple lists here – those stay reserved for the brochure/detailed itinerary, delivered post-form.)

****[IMAGE PLACEHOLDER – Destinations]**** One image per column (Ayodhya / Varanasi), placed above each column's text. Portrait or square crop works well here since the layout is already two-column. Recommended: 800x1000px (4:5) per image, WebP, under 250KB.

3.5 Itinerary Teaser

****Purpose:**** Show day-level structure only – themes, not times or hotel names.

****Content:****

Section header: ****"3 Days, 2 Nights – Thoughtfully Paced"***

- ****Day 1 – Varanasi:**** Arrival, Kashi Vishwanath Darshan, Ganga Aarti
- ****Day 2 – Varanasi:**** Sunrise Ganga Boat Ride, Temples, Activities or Leisure Time
- ****Day 3 – Ayodhya:**** Ram Darshan, Hanuman Garhi Mandir & Departure

Supporting line beneath: **"Each day also covers 3-7 additional temples and sacred sites in and around the city, sequenced for minimal crowds and unhurried darshans."**

Customization line: **"Prefer more time, food trails, culture walks, or special pujas? We tailor the pace and duration to your family's needs."**

CTA: **"Get the complete itinerary"** → points to form.

[IMAGE PLACEHOLDER – Itinerary] One representative image per day (3 total – e.g. Kashi Vishwanath, Ganga boat/aarti, Ram Mandir), displayed alongside or above each day's text block. Recommended: 600×400px (3:2) each, WebP, under 200KB.

3.6 Assisted Travel

Purpose: Builds trust specifically with the audience segment most likely to convert on a pilgrimage ad (families traveling with elders). Safe to show in full.

Content (from brochure):

Header: **"Saum Specializes in Fully Assisted Travel For"**

- Senior citizens
- Pregnant women
- Travellers with special needs
- Parents with infants & toddlers

Sub-points:

- Attentive caregivers, wheelchair assistance, porters at the airport
- Emergency medical support: well-equipped medical kit, on-call doctors, tie-ups with ambulances & hospitals
- Comfortably-paced darshans, navigation support through crowds, hydration & seating breaks, rest at hotel between temple visits
- Regular updates & check-ins

Closing line: **"Our pilgrimages are hand-held at every step."**

[IMAGE PLACEHOLDER – Assisted Travel] One supporting image showing care/assistance in context (e.g. a guide/caregiver assisting an elderly traveler, wheelchair support at a temple, a family with an elder at a ghat). This section is currently text-heavy relative to its neighbors, so a single well-chosen image here does the most to break monotony. Recommended: 1000×600px (5:3), WebP, under 250KB.

3.7 Packages & Pricing

Purpose: Pricing is included deliberately as a **lead-qualification filter** – the goal is not maximum leads, it's leads who've seen pricing and still chose to convert. Each tier gets a **starting-from** price (not final), with a small set of tier-defining highlights (categories, not hotel names).

Content:

Package	Benefits	Highlights	Starting Price
***Premium**	Comfort & Convenience	Boutique/4-star stays · Private Ganga boat ride · Reserved-seating Ganga Aarti	***₹45,000** per person (twin sharing)
***Luxury**	Elevated Spiritual Experience	5-star stays · Deluxe private boat ride · Ganga Aarti participation	***₹55,000** per person (twin sharing)
***Royale**	The Saum Signature Pilgrimage	5-star/Palace stays · Mercedes/BMW transfers · Deluxe boat ride with live classical performance · Special pujas with personal priests	***₹1,25,000** per person (twin sharing)

Footnote (below table): *Final pricing depends on travel dates, group size, and customization. Get an exact quote below.*

CTA: *Get My Custom Quote* → form.

***[IMAGE PLACEHOLDER – Packages]** One small representative image per tier (e.g. a hotel/stay shot for Premium, a boat ride shot for Luxury, a Mercedes/BMW transfer or live classical performance shot for Royale) – placed at the top of each package card. Recommended: 400×300px (4:3) each, WebP, under 150KB, since these are smaller in-card visuals rather than full-width imagery.

3.8 Social Proof (Testimonials)

Purpose: Trust via guest voice. Text-only (no photos/videos available at launch).

Layout: 3 quote cards, horizontal scroll on mobile, 3-across on desktop. Each card: large opening quotation mark, testimonial text, guest name + city, and a colored initial-avatar (first letter of name in a circle) in place of a photo – styled intentionally, not as a placeholder gap.

Content: 3 testimonials – *pending from Saum team.* Structure to be built now; copy to be dropped in when available. Suggested character length per testimonial: 40-70 words, to keep card heights consistent.

3.9 FAQ

Purpose: Handle objections quickly, without dumping full logistics.

- *Is this suitable for elderly parents or family members with mobility needs?* – Yes, Saum specializes in assisted travel for seniors, with wheelchair assistance, caregivers, and paced schedules built in.
- *Can the dates or duration be customized?* – Yes – while our standard yatra is 3D2N, we tailor pace, duration, and add-ons (food trails, culture walks, special pujas, other cities) to your needs.
- *Is food vegetarian / Jain-friendly?* – Yes, dietary preferences including vegetarian, satvik, and Jain food are accommodated throughout.

4. *What's the typical group size?* – We handle everything from individuals and couples to families and large groups; transport and pacing are adjusted accordingly.

5. *What's included in the price?* – Stays with breakfast, priority darshan tickets, private transport, guides, priest assistance are included; final inclusions vary by package – get your custom quote for full details.

3.10 Final CTA

****Purpose:**** Last conversion opportunity for anyone who scrolled without filling the form.

****Content:****

Headline: ***"Your Pilgrimage Begins With a Conversation"***

Subline: ***"Share a few details and we'll get back to you with pricing, availability, and a custom itinerary."***

Form repeated in full.

Below form: click-to-call and WhatsApp CTA as fallback (***"Prefer to talk? Call or WhatsApp us at +91 99029 30443."***

4. Mobile-Specific Behavior

1. Hero renders normally, full-width.
2. ****Immediately below the hero, the full form renders inline**** (not collapsed/accordion) – this is the primary mobile conversion point.
3. As the user scrolls past the form, a ****sticky bottom bar**** appears: label ***"Get Pricing & Itinerary"*** with a CTA button.
4. Tapping the sticky bar ****opens the form in a modal/overlay**** (not a scroll-to-top jump) – modal should contain the same form fields as the inline version, dismissible via close icon or tap-outside.
5. Sticky bar should not appear until the user has scrolled past the inline form (avoid showing it while the form is already visible).

5. Form Requirements

- ****Backend:**** Existing Google Form (already built, per existing infra) – reuse the same backend; do not create a new form.
- ****Frontend:**** Build a native-styled form on-page (matching Saum design system) that submits into the existing Google Form's field entry IDs – ****do not embed the raw Google Form iframe****, for UX/branding consistency.
- ****Fields:**** Use the existing Google Form's field set/entry IDs already available in the codebase (same as used elsewhere on the site), with "Kashi Vishwanath" prefilled for Temple of Interest field
- ****Mandatory fields:**** As with the other forms but also make email mandatory.
- ****Success state:**** On-page confirmation message (not a redirect to Google Forms' native "response recorded" page) – e.g. ***"Thank you! Our team will reach out within 24 hours with your custom itinerary and pricing."***
- ****Instances on page:**** Hero (desktop sticky / mobile inline), Packages section CTA (can scroll-to same form), Final CTA section (full repeat).

All instances should submit to the same backend; if using scroll-to-single-form pattern, ensure smooth-scroll targets are correctly anchored from each CTA button.

6. Design & Style

- Follow existing Saum site design system (colors, typography, spacing) – pull from current site's CSS/tokens already in the Cursor codebase. No new brand elements to introduce.
- Icon set for §3.3 (Saum Experience) – reuse existing iconography from the main site/brochure if available as assets; otherwise source a matching icon set consistent with existing style.
- Comparison table (§3.2) and package table (§3.7) should use a clean, readable table treatment consistent with site style – avoid dense/cramped mobile rendering; consider stacked card layout for these tables on mobile rather than horizontal scroll of a wide table.

7. SEO / Meta

- This is a paid-traffic landing page – low SEO priority, but include basic meta tags for consistency:
 - Title: **"Ayodhya & Varanasi Yatra – Pricing & Itinerary | Saum"**
 - Meta description: consistent tone with main destination page's existing meta description.
- `noindex` is applied on this page, consistent with the existing AV1 page – AV2 is paid-traffic-only and should not be indexed.

8. Analytics & Tracking (Ignore meta Pixel for now, we don't have Meta Pixel. Suggest what changes you need for the rest, but this is only after all other tasks are completed and page is created)

- Meta Pixel: PageView on load, Lead event on form submission (both inline and modal instances). If not
- Google Analytics: standard pageview + custom event on form submit, CTA clicks (hero, packages, final CTA) for funnel analysis.
- UTM parameters from ad campaigns should be captured and passed into the form submission (as hidden fields) so leads can be attributed back to specific ad sets.

9. Open Items / Pending From Saum Team

1. ****Testimonial copy**** – 3 testimonials (name + city + quote), to be added when ready; page ships with structure built, awaiting content.

10. Out of Scope

- AV1 page – unaffected by this spec, referenced only for context.
- Main destination page (`/temples/ayodhya-varanasi/`) – unaffected.

- Any changes to the global site nav outside of AV2's own stripped header/footer.
